

## **E-General Assembly, supported by also CGFT, has received the award under FSTech Awards.**

The Electronic Assembly System (E-GKS), which provides an electronic platform for electronic voting to the shareholders of listed companies in stock Exchange, has received 'Best Use of Online Services' award in the scope of FSTech Awards. Financial Sector Technologies (FSTech), which is one of the industry's leading magazine and broadcasts mainly for employees of information technology, rewards successful projects each year by following the innovations and developments in the sector.

Providing data to CGFT, as well as advertising the system, and supporting the implementation of the E-GKS since the beginning, has not just only brought technological innovations, but also increased the transparency in stock Exchange and made a major contribution to eliminate the barriers in corporate governance. With this system, it is expected for Turkey to become much more attractive to global investors and to contribute to the Istanbul International Financial Center Project.
